

SAURABH CHAUHAN

🌐 saura3h.xyz ✉ saurabh10102@gmail.com 🔗 linkedin.com/in/starc007 🐙 github.com/starc007 📍 Bengaluru, IN

Summary

Full-stack engineer with 5+ years building web applications. Comfortable across the stack - from frontend architecture to on-chain integrations on Solana and EVM chains. Have built and shipped DeFi products, cross-chain interfaces, and agent systems used by real users. Open-source contributor to wagmi, mppx, and accounts (Tempo).

Experience

Frontend Engineer

Jun 2024 – Present

Nodeops

Bengaluru, IN

- Built and owned the entire UI for Nodeops Console from scratch in React and TypeScript, scaling to 25,000+ active users. Drove architecture decisions and quality across all user-facing surfaces.
- Developed a shared component library adopted across 3+ internal products, cutting feature development time by ~30% and enforcing consistent design and security patterns.
- Built a Telegram bot enabling non-technical users to deploy and manage blockchain nodes directly from chat, significantly reducing onboarding friction.
- Shipped a Telegram trading bot with 2,000+ users supporting token swaps, limit orders, and cross-chain bridging across multiple networks in a single chat interface.

SDE 2 – Frontend

Aug 2022 – Apr 2024

Bitbns

Bengaluru, IN

- Led end-to-end development of the Bitdroplet DApp, driving a 25% increase in user engagement and contributing directly to revenue growth.
- Built core features for Playota, a decentralized on-chain fantasy game, including game logic, referral system, wallet-based login, and user profiles.
- Optimized frontend performance across key pages: reduced load time by 60%, resulting in a 20% lift in engagement and 15% growth in active users.
- Implemented secure wallet integration patterns using Web3.js and WalletConnect across multiple DeFi products.
- Tech Stack: React, Next.js, Svelte, React Native, Web3.js, WalletConnect

Full Stack Developer

Aug 2021 – Jul 2022

Linkedphone

Hyderabad, IN

- Built a customer support ticketing system maintaining 100% uptime using JavaScript and Node.js.
- Collaborated with design to improve product UI, leading to a 25% increase in conversion rate.
- Implemented a real-time WebSocket API on AWS Lambda and API Gateway for live event processing.
- Tech Stack: JavaScript, jQuery, Node.js, AWS, WebSockets

Projects

Wave | *React Native, TypeScript, Node.js, Solana*

2024

- Mobile social wallet on Solana combining peer-to-peer messaging with native crypto payments. 300+ users. Integrated Solana wallet signing, token transfers, and on-chain identity.
- Link: usewave.app

Beui | *Nextjs, Framer Motion, TailwindCSS*

Jun 2026

- Open Source Motion component library for React / Next.js, distributed via the shadcn registry.
- Link: beui.dev

Sentinel | *TypeScript, Base, x402, Telegram*

Apr 2026

- Reputation-gated spend governance system for AI agent wallets on Base. Uses on-chain reputation scoring to enforce spending limits, pay-per-query API access via x402, and Telegram-based human approval for high-value transactions.
- Link: github.com/starc007/sentinel

Crev | *Rust, Ollama*

Mar 2026

- CLI tool for AI-powered code review supporting local (Ollama) and cloud LLMs. Written in Rust.
- Link: github.com/starc007/crev

Technical Skills

Languages: JavaScript, TypeScript, Rust

Frontend: React, Next.js, Svelte, React Native, TailwindCSS

Backend: Node.js, AWS (Lambda, API Gateway), WebSockets, REST APIs

Infrastructure: DigitalOcean, Nginx, PM2, Cloudflare Workers

Blockchain & Web3: Solana, Web3.js, WalletConnect, Solidity, cross-chain protocols

Tools: Git, Tauri, SQLite, Ollama, Telegram Bot API
